

Copyrights and Permissions

Specific terms and conditions related to the use of the IEEE-SA Web Site and materials.

IEEE STANDARDS ASSOCIATION COPYRIGHT POLICY FOR CONTRIBUTIONS

General Principles of the IEEE Standards Association (IEEE-SA) Copyright Policy

- Enhancing the accessibility, distribution and use of information is a major objective of IEEE and the IEEE-SA, limited only by the requirements of viability and professional propriety.
- In exercising its rights under copyright, the IEEE-SA recognizes that it is acting in part to serve and protect the interests of its standards participants and participating entities.
- Fees for the reuse of IEEE standards material are appropriate for contributing to the cost of standards development oversight and original publication, especially where the reuse involves a license to copy, or allows resale, or is of a magnitude that would tend to reduce subscription or other sales income.

CONTRIBUTIONS TO IEEE STANDARDS AND STANDARDS-RELATED PRODUCTS

Contributions to IEEE Standards

All contributions to IEEE standards development (whether for an individual or entity standard) shall meet the requirements outlined in the [IEEE-SA Copyright Policy](#).

There are two types of contributions to IEEE standards development, contributions from previously Published sources and contributions that have not been previously Published.

Contributions from Previously Published Sources

Any participant who submits contributions from previously [Published](#) sources shall comply with 7.2.1 of the IEEE-SA Standards Board Bylaws.

[IEEE Permission Form Letters](#) (.zip) to request and grant permission to use material unchanged or modified are available online.

Contributions Not Previously Published

Any participant who submits contributions that have not been previously Published conveys the rights to the IEEE that are outlined in 7.2.2 of the [IEEE-SA Standards Board Bylaws](#).

Use by IEEE of Contributions

Use of any contribution in connection with the standards project for which the contribution was made is defined as granting IEEE the unrestricted right to

- Display, distribute, and provide access to the contribution worldwide, to participants in the standards project or to any interested party in the development of the standards project,
 - Using any method and in any form, including, but not limited to, providing access in print and electronically on a server or in a searchable database
 - Accessing the contribution at no cost or for a fee, and with or without requirement for IEEE or IEEE-SA membership
- Modify and incorporate the contribution into the proposed draft IEEE standard that is a Work Product of the standards project

Upon approval of the standard, the material from the contribution that is incorporated into the approved IEEE Standard is part of the Work Product copyrighted by IEEE and falls under item b) in Clause 7.2.2 of the [IEEE-SA Standards Board Bylaws](#). IEEE has full exploitation rights to the material in the approved standard (e.g., it can use, license, or distribute the material in the approved standard in any way it wishes).

With respect to the original contribution, IEEE does not have the right to

- Submit the contribution to any other proposed draft IEEE standard without agreement by the original submitter
- Grant permission for another entity to use material from the contribution in another work or derivative work

IEEE will comply with legal requirements to provide the contribution, including but not limited to, assisting in the administration of any matter within the jurisdiction of any department or agency of a national or international government entity.

Contributions to IEEE Standards-Related Products

Authors who develop standards-related products have separate author agreements that address copyright ownership for those products. If an author submits material containing excerpted content from previously Published sources, the author is responsible for obtaining permission for use of that material from the copyright owner, or from a person with the authority or right to grant copyright permission. Requests by authors for copyright permission shall be coordinated with the [IEEE-SA Intellectual Property Rights](#).
