Document Title: Proposal for a new Study Group

Document Date: June 20, 2011

Document No (to be assigned by Chair) DCN

Notice: This document has been prepared to assist IEEE SCC41 and its Working Groups. It is offered as a basis for discussion and is not binding on the contributing individual(s) or organization(s). The material in this document is subject to change in form and content after further study. The contributor(s) reserve(s) the right to add, amend or withdraw material contained herein.

Release: The contributor grants a free, irrevocable license to the IEEE to incorporate material contained in this contribution, and any modifications thereof, in the creation of an IEEE Standards publication; to copyright in the IEEE' s name any IEEE Standards publication even though it may include portions of this contribution; and at the IEEE' s sole discretion to permit others to reproduce in whole or in part the resulting IEEE Standards publication. The contributor also acknowledges and accepts that this contribution may be made public by IEEE SCC 41.

Patent Policy and Procedures: The contributor is familiar with the IEEE Patent Policy and Procedures including the statement "IEEE standards may include the known use of patent(s), including patent applications, provided the IEEE receives assurance from the patent holder or applicant with respect to patents essential for compliance with both mandatory and optional portions of the standard." Early disclosure to IEEE SCC 41 and its Working Groups of patent information that might be relevant to the standard is essential to reduce the possibility for delays in the development process and increase the likelihood that the draft publication will be approved for publication. Please notify the Chair <jhoffmeyer@ieee.org> as early as possible, in written or electronic form, if patented technology (or technology under patent application) might be incorporated into a draft standard being developed within the IEEE SCC 41 Committee. **If you have questions, contact the IEEE Patent Committee Administrator at <patcom@ieee.org>.**

Proposal for a new Study Group

Proposal to the DySPAN-SC Plenary:

Consider establishing a new study group on
Dynamic Spectrum Access in Vehicular Environments (DSA-VE)

Main purpose:

Evaluate the need for DSA standardization in this area and provide all information needed to prepare a decision on the creation of a new working group.

Should be created as a pre-PAR activity.

Background – The need for a Study Group (I/III)

ITS frequency bands have been allocated for both road safety and TTI in the 5.9 GHz bands.

- Still open interference and congestion issues in safety-relevant situations due to limited spectrum availability (few and narrow bands of 5 and 10 MHz, use of neighboring IMS bands needed).

TV white space use has been demonstrated in Car-to-Car communications.

- Potentially creates lots of new regulatory issues.
- Coexistence issues with users relying on geolocation DBs.
- Hard timing constraints on sensing and device reconfiguration.

Background – The need for a Study Group (II/III)

Useful applications of vehicle-to-infrastructure communication have been demonstrated based on UMTS, WiMAX and LTE.

- Lack of approaches to handle timing constraints along with increased user density in cellular systems.
 - No grounds for DSA if utilized for example in LTE-advanced
- Operators consider dynamic cell-size adjustment based on communication purpose to enhance energy-conservation and minimize interference (e.g. optimizing cell-coverage along wayside/roadside).
- Open issues on spectrum planning and management, interference mitigation in dynamics and spectrum efficiency.

Background – The need for a Study Group (III/III)

Car manufacturers evaluate the benefits and cost factors if utilizing SDR and CR in their vehicles.

- One transmitter / multiple receivers and multi-channel MAC operation will become the regular case.
- Transceiver and antenna technical characteristics have to follow the car's body design principles.
- Multi-standard operation will be mandatory (e.g. LTE, 802.11abgnp, Bluetooth).

It appears that the area may benefit from an application of DSA principles and from related standardization.

Expected Scope of the new Study Group

Consider use of DSA systems and principles for

1. In-vehicle wireless communication!!

- Human user as well as M2M.
- Machinery compartments, cabin, consist, ...

2. Vehicle-to-vehicle communication

- Safety as well as non-safety ITS communication.

3. Vehicle-to-wayside/roadside communication

- DSRC as well as vehicle control

4. Vehicle-to-infrastructure communication

- Cellular for ITS as well as generic applications

Expected Activities of the new Study Group

- Evaluate on
 - The need for DSA in vehicular communications;
 - State of the art and the need for standardization in scope.
- Identify
 - relevant complementing standardization activities in the area;
 - stakeholders to address.
- Prepare
 - Initial evaluation of relevance and feasibility;
 - Information needed to draft one or more PARs!!

Expected cooperation with other DySPAN-SC WGs

The new study group can complement ongoing work, for example

- Requirements and policies for spectrum sensing in mobile environments (1900.6)
- Utilization of vehicles as spectrum sensors (1900.4, 1900.6)
- Policies and coexistence issues for mobile users (1900.5, 1900.6)
- Feasibility and constraints of white space access for mobile users (1900.6, 1900.7)
- Requirements for multi-standard / multi-channel operation (1900.7)
- Requirements for mobile networks in DSA / non-DSA configurations (1900.4, 1900.5)

Conclusions

The need, scope and purpose for a new study group on DSA in vehicular environments has been given.

Potential technical areas of relevance to address have been given.

It has been shown how this group and its potential outcomes will fit into the DySPAN-SC framework of activities.

The DySPAN-SC is now asked if this proposed activity is considered within scope and if the creation of a new study group will be supported.
